Layer Floor System

The alternative system for comm

Ethologically sound poultry farming

The Farmer Automatic Floor System was designed in cooperation with poultry farmers and fully satisfies animal welfare requirements for ethologically sound poultry rearing and production. Increasing numbers of farmers in Europe and abroad are using the Farmer Automatic Floor System for their laying hens and laying parents because the details of its innovative equipment are highly impressive:

- The well-planned arrangement of the Farmer Automatic feed chain, nipple drinkers, perches, nesting boxes with integrated egg collection and automatic expulsion system, guarantee optimum results.
- Plastic-coated floor mesh provides a high degree of self-cleaning: manure does not stick, mites can not become established.

Safe and effective:
the proven Farmer Automatic chain feeding system

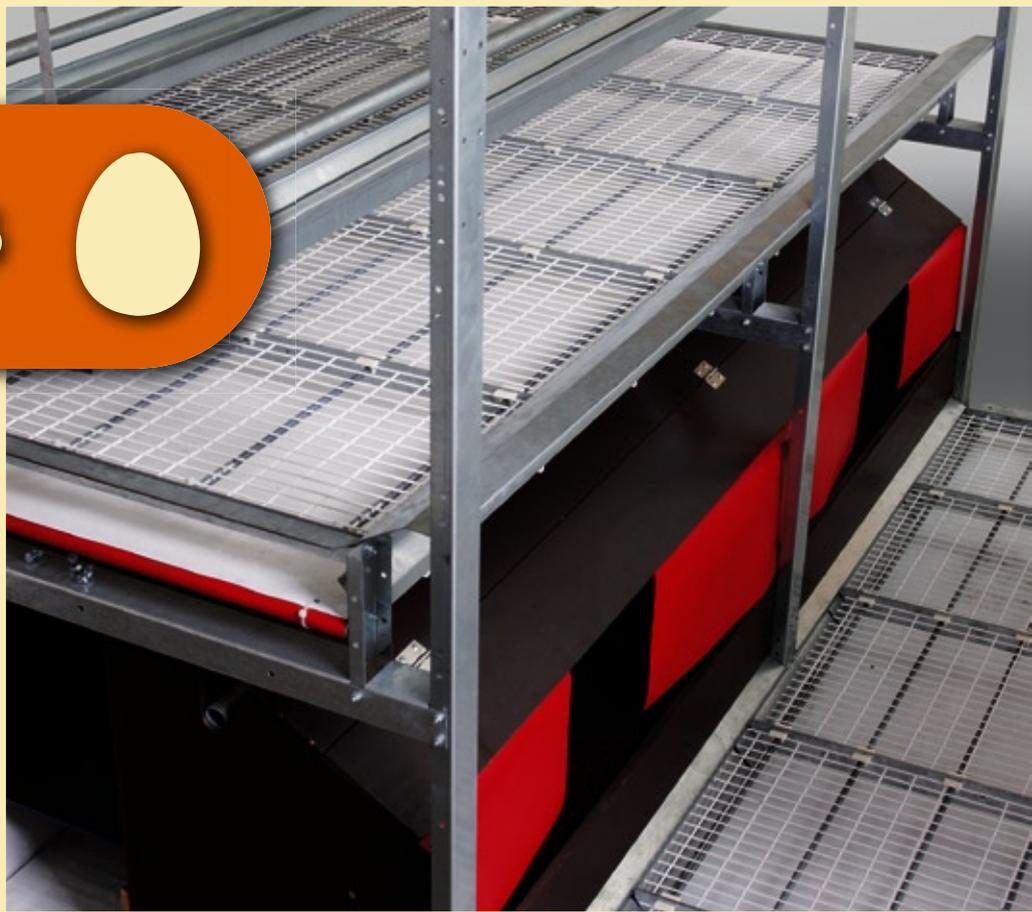

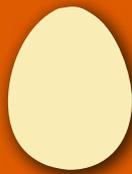

Safe and gentle:
the automatic egg collection

Safe and hygienic:
manure removal by means of manure belts on rollers

Commercial layers

- Manure removal on Farmer Automatic manure belts running on rollers ensures a clean environment in the house and fewer flies.
- For individual planning a range of versions, including two-storey versions, is available depending on the house dimensions.

Automatic feeding system

The proven Farmer Automatic chain feeding system is easy and reliable to handle and use. Long-lasting and wear-resistant, it ensures feed is distributed evenly and quickly with reduced wastage and low energy requirements.

Automatic egg collection

The egg collection belts are an integrated part of the nesting boxes and automatically transport eggs away from the birds' reach and straight to a collection table or elevator, or alternatively straight to a packer or grading machine via a connected Farmer Automatic egg cross conveyor.

Automatic manure removal

Safe, straightforward and regular manure removal is guaranteed by polypropylene manure belts travelling on rollers. At the end of the row of aviaries the manure falls into a manure cross conveyor. The total solution reduces ammonia build-up and fly infestations to improve the environment in the layer house.

Advantages at a glance

- Suspended perches and feeding and drinking systems prevent mites getting to the roosting birds
- Accessible mesh floors for simple checking
- Highly wear-resistant chain feeding system
- System at appropriate height for birds to hop up to
- Various nesting boxes
- Plastic-coated floor mesh
- Manure removal by means of belts on easy-running manure belt rollers

Accessible mesh floors

Accessible mesh floors for convenient, simple and fast checking of the entire system.
