

Farmer Automatic

Rearing System

Pullet Cage

The variable pullet cage

Safe growth

The Farmer Automatic pullet cage combines all features for safe and economic rearing of layer chicks:

- Vestosint® coated, rectangular wire mesh on cage floors allows safe rearing of pullets in all decks without the need for additional floor matting in the first days of growing cycle.
- Feed access slots are centrally adjustable to fit the size of pullets from day one, yet they are unable to slip into the feed trough.
- Optimized cage dimension for uniform growth.

Automatic feeding system

The proven Farmer Automatic chain feeding system is easy and reliable to handle. Long-lasting and wear resistant, it ensures feed is distributed evenly and quickly without feed loss.

Automatic drinking system

PVC nipple pipes with 4 super-nipples per cage (360° action) with drip cups provide fresh water for the chicks. Nipple pipes are centrally height adjustable to follow the growth of the chicks.

Automatic manure removal

Manure is removed automatically from all decks on polypropylene manure belts. To extend the lifetime of the manure belts Farmer Automatic has developed special manure belt rollers which support the belts. Even in very long cage rows the manure belts run as easily as if on ball bearings.

Chain feeding system with centrally adjustable feed access slots

Centrally height-adjustable drinker line

Automatic manure removal reduces ammonia and risk of infections

Advantages at a glance

- Vestosint® coated cage floors prevent callus at the chick's feet and keep clean because manure does not stick to it
- Centrally adjustable feed access slots and nipple drinkers
- Manure removal on belts running on rollers
- Automatic feeding and drinking
- Wear-resistant V-link chain feeding system
- Automatic manure removal reduces ammonia and prevents infections
- Healthier birds
- Clean and hygienic environment for bird and human
- Lower labor cost with high level of automation
