Farmer Automatic

Floor System

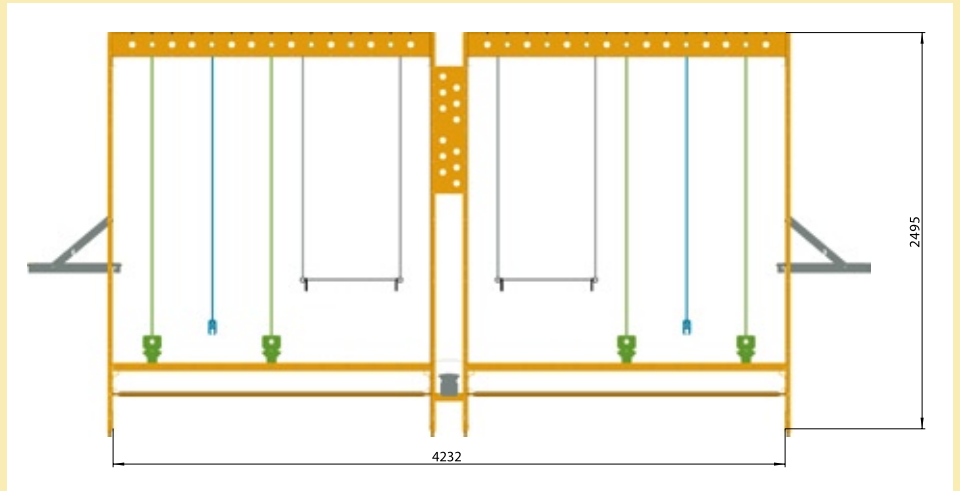

Pullet-Rearing Floor System

The alternative pullet rearing system

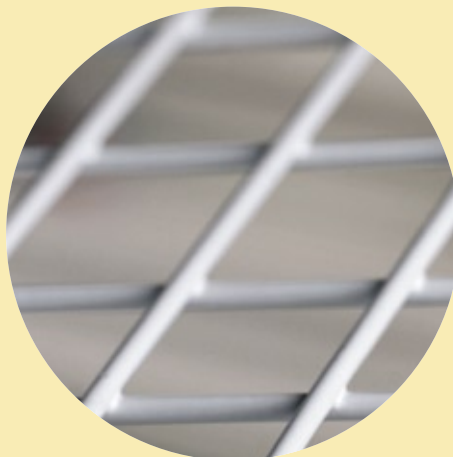

Ethologically sound rearing

The Farmer Automatic Floor System has been designed in cooperation with poultry farmers as an alternative means of rearing poultry. It fully satisfies animal welfare requirements for ethologically sound poultry rearing and production and its innovative equipment is truly impressive:

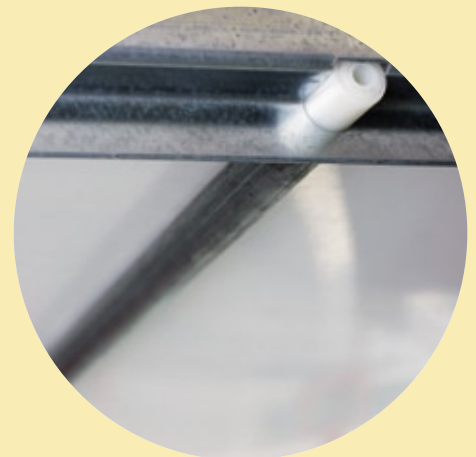

- The flexibly designed system can be quickly adjusted to changes in regulations and conditions.
- All components in the system are suspended from a frame, the portal system, patented by Farmer Automatic.
- The well-planned arrangement of the Farmer Automatic feed chain, nipple drinkers and perches guarantees optimum results.

Safe and effective:
the proven Farmer Automatic
chick elevator

Convenient house checking:
accessible mesh floors

Safe and hygienic:
manure removal by means of
manure belts on rollers

stem

- Plastic-coated floor mesh provides a high degree of self-cleaning: manure does not stick, mites cannot become established.
- Manure removal on Farmer Automatic manure belts running on rollers ensures a clean environment in the house and fewer flies.
- For individual planning, a range of versions – including two-storey versions – is available depending on the stall dimensions.

Automatic feeding system

The proven Farmer Automatic chain feeding system with speed control is easy and reliable to handle and use. Long-lasting and wear-resistant, it ensures feed is distributed evenly and quickly with reduced feed loss and low energy requirements.

Automatic manure removal

Safe, straightforward and regular manure removal is guaranteed by polypropylene manure belts travelling on rollers. At the end of the row the manure falls into a manure cross conveyor. The total solution reduces ammonia build-up and fly infestations to improve the environment in the house.

Accessible mesh floors

Accessible mesh floors for convenient, simple and fast checking of the entire system.

Advantages at a glance

- Suspended systems without floor contact – Portal system®
- Accessible mesh floors for simple checking
- Highly wear-resistant chain feeding system
- Suspended nipple drinkers
- Raised perches
- System at appropriate height for birds to hop up to
- Plastic-coated floor mesh
- Manure removal by means of belts on easy-running manure belt rollers
- Easy transition from pullet rearing to laying hen – no adjustment problems
